Q1

$$\frac{b \neq \neg a \quad c \neq b}{a \neq c}$$

Existential Assumption ($a \neq \neg a$) changes the diagram to there is a x in every single area of the diagram.

so $a \neq c$ is true and this syllogism is sound.

Q2

$$\frac{a \neq b \quad b \neq c}{a \neq c}$$

1. Substitute $\neg c$ for c to get:

$$\frac{a \neq b \quad b \neq \neg c}{a \neq \neg c}$$

2. Apply contraposition and the double negation law:

$$\frac{a \neq b \quad b \neq \neg c}{\neg \neg c \neq \neg a}, \text{ which is } \frac{a \neq b \quad b \neq \neg c}{c \neq \neg a}$$

3. Denying the conclusion with the first premise:

$$\frac{b \neq \neg c \quad c \neq \neg a}{a \neq b}$$

Q3

$$\begin{array}{c}
 \frac{\frac{\frac{}{P \vdash P, q} I}{\vdash P, P, q} \neg R}{\vdash \neg P \wedge \neg q, P, q} \neg R \quad \frac{\frac{\frac{}{Q \vdash P, Q} I}{\vdash Q, P, q} \neg R}{\vdash \neg P \wedge \neg q, P, q} \neg R \\
 \hline
 \vdash \neg P \wedge \neg q, P, q \quad \wedge R \\
 \hline
 \vdash \neg P \wedge \neg q, P \vee q \quad \vee R \\
 \hline
 \vdash (\neg P \wedge \neg q) \vee (P \vee q) \quad \vee R
 \end{array}$$

So it's a tautology

Q4

$$\begin{array}{c}
 \frac{\frac{\frac{}{\Gamma \vdash P, \Delta} \neg L}{\Gamma, q \vdash \Delta} \neg L}{\Gamma, q \vee \neg p \vdash \Delta} \vee L \\
 \hline
 \Gamma, p \rightarrow q \vdash \Delta
 \end{array}$$

$$\begin{array}{c}
 \frac{\frac{\frac{}{\Gamma, p \vdash q, \Delta} \neg R}{\Gamma \vdash q, \neg p, \Delta} \neg R}{\Gamma \vdash q \vee \neg p, \Delta} \vee R \\
 \hline
 \Gamma \vdash p \rightarrow q, \Delta
 \end{array}$$

$$\Rightarrow \frac{\frac{}{\Gamma, q \vdash \Delta} \neg L \quad \frac{}{\Gamma \vdash P, \Delta} \neg L}{\Gamma, p \rightarrow q \vdash \Delta} (\rightarrow L)$$

$$\frac{\frac{}{\Gamma, p \vdash q, \Delta} \neg R}{\Gamma \vdash p \rightarrow q, \Delta} (\rightarrow R)$$

$$\frac{}{\Gamma, a \vdash a, \Delta} I$$

$$\frac{\frac{}{\Gamma \vdash a, \Delta} \neg L}{\Gamma, \neg a \vdash \Delta} \neg L \quad \frac{\frac{}{\Gamma, a \vdash \Delta} \neg R}{\Gamma \vdash \neg a, \Delta} \neg R$$

$$\frac{\frac{}{\Gamma, a, b \vdash \Delta} \wedge L}{\Gamma, a \wedge b \vdash \Delta} \wedge L \quad \frac{\frac{}{\Gamma \vdash a, \Delta} \wedge R \quad \frac{}{\Gamma \vdash b, \Delta} \wedge R}{\Gamma \vdash a \wedge b, \Delta} \wedge R$$

$$\frac{\frac{}{\Gamma, a \vdash \Delta} \vee L \quad \frac{}{\Gamma, b \vdash \Delta} \vee L}{\Gamma, a \vee b \vdash \Delta} \vee L \quad \frac{\frac{}{\Gamma \vdash a, b, \Delta} \vee R}{\Gamma \vdash a \vee b, \Delta} \vee R$$

The sequent calculus
