

CL - Tutorial 3

Exercise 1

a = diligent student

b = ignorant student

c = are successful.

$$\frac{a \neq c \quad b \neq \neg c}{a \neq \neg b}$$

No a is b.

so this argument is not sound.

a = eagle

b = pig

c = can fly

$$\frac{a \neq c \quad b \neq c}{b \neq a}$$

It's sound because there is some b is not a.

$$\frac{a \neq b \quad b \neq c}{a \neq c} \Rightarrow \frac{a \neq c \quad b \neq c}{b \neq a}$$

Exercise 2

a = animals

b = unicorns

c = horses.

$$\begin{array}{c} a \models \neg b \quad b \models c \\ \hline c \not\models a \end{array}$$

we don't know whether or not

Some c is not a, so it is not sound.

Therefore, the number of the " \models " and " \neg " are always even

Exercise 3

$$(a) \quad \frac{a \models b \quad c \models a}{c \models \neg b} \quad (x \models \neg x)$$

so it's sound

$$(b) \quad \frac{a \models b \quad c \models a}{c \models b} \Rightarrow \frac{c \models b \quad c \models \neg c}{b \models \neg c} \Rightarrow \frac{b \models \neg c}{c \models \neg b}$$

$$\Rightarrow \frac{a \models b \quad c \models a}{c \models \neg b}$$

Exercise 5

1. isBig, isAmber \models hasThinBorder = False
2. isSmall $\not\models \neg$ isDisc = True
3. isSmall, isSquare $\not\models \neg$ isAmber = False
